

PRE-SET LINKAGE CONTROL FOR

FORDSON **MAJOR**

Primarily designed for use with the F-R 4 Furrow Mounted Plough (TS-73) this attachment, the Pre-Set Linkage Control, enables depth of ploughing to be pre-set by means of a control lever which has a clearly calibrated quadrant. The plough (which has no depth wheel) is lowered to a predetermined depth and is held there by hydraulic power. This combination enables 10 or 12 inch wide 4-furrow ploughing to be carried out with the Major.

Land irregularities are taken care of by the special extending top link which can, if required, incorporate Automatic Clutch Release.

The Linkage Control does not have to be removed in order to use implements with depth wheels as the special top link can be locked and the Linkage pre-set to maximum depth.

Manufactured by

FORD MOTOR COMPANY LIMITED · DAGENHAM

**The New TS-73 Plough in Work
With Pre-Set Linkage Control**

The Pre-Set Linkage Control consists of two assemblies :

1. A height regulating attachment including an adjusting lever (conveniently placed for the operator) and a cam which fits to the tractor lift arm.
2. An adjustable length telescopic top link in place of the standard link.

It is easily fitted to existing current type Fordson Majors or supplied on new tractors ex works.

Ford policy is one of continuous improvement. The right to change prices, specifications and equipment at any time without notice is reserved.
